

TIER-Plus — Scenario Comparison Report

Regional profile: Zambia | Generated: 24 June 2026, 21:59

△ **Interpretation note.** This tool is *indicative* of the direction and rough magnitude of impact of different choices. Outputs may not be accurate to exact numbers and changes to the percentage 95-95-95 targets should be interpreted in conjunction with the absolute change in the number of people in each group. Costs are limited to treatment and included intervention costs only. As a result, many indirect and other programme costs are excluded. Specific numbers used for budgeting, target-setting, or operational planning should come from country-led processes, supported (but not replaced) by this tool.

Progress toward 95-95-95 (end of year)

Indicator	Baseline	Scenario 1	Scenario 2
1st 95 — % of PLHIV diagnosed	95.9%	96.1%	95.5%
2nd 95 — % of diagnosed on ART	97.7%	97.7%	97.7%
3rd 95 — % on ART suppressed	98.0%	98.0%	98.1%

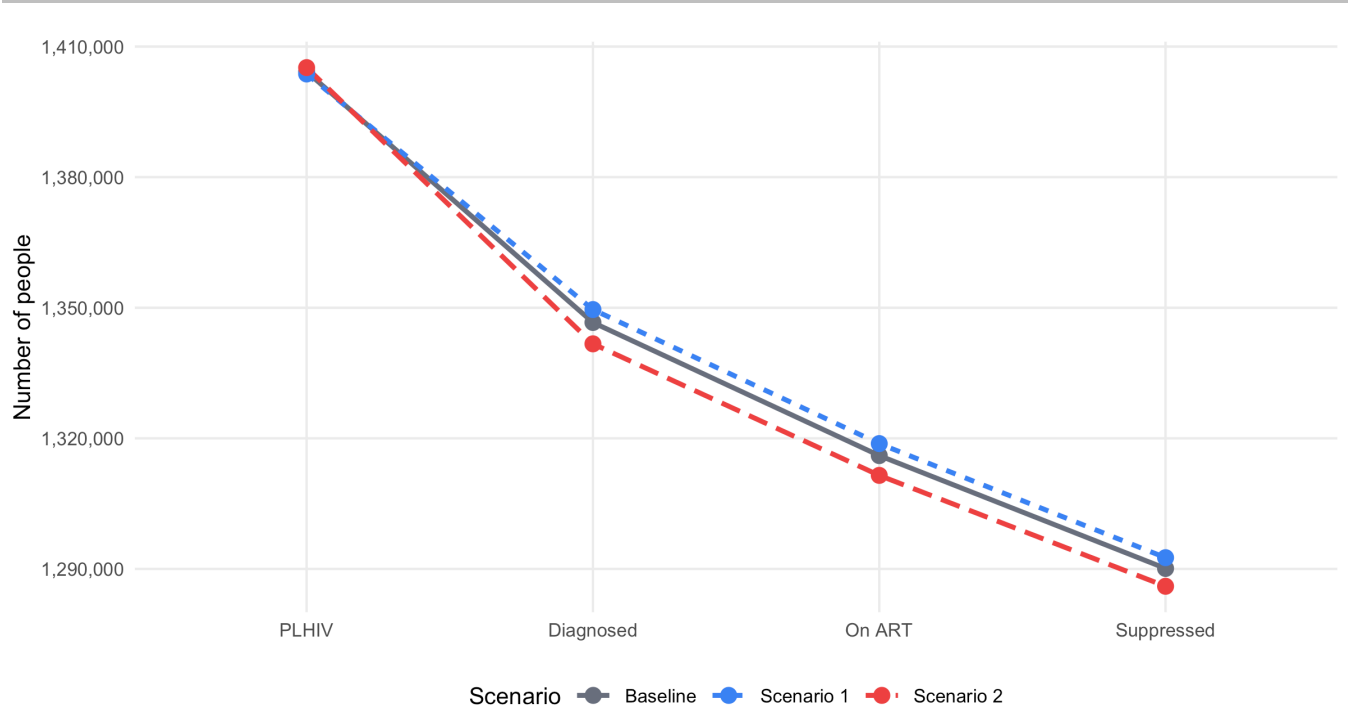

Key epidemiological outcomes (end of year)

Outcome	Baseline	Scenario 1	Scenario 2
New adult acquisitions	30,400	29,795 (-605)	31,402 (+1,002)
New infant acquisitions	1,965	1,965 (0)	1,965 (0)
HIV-related deaths	16,260	16,205 (-55)	16,350 (+90)
ART initiations	65,095	67,953 (+2,858)	60,362 (-4,733)
End-of-year on ART (suppressed)	1,290,113	1,292,586 (+2,473)	1,286,018 (-4,095)

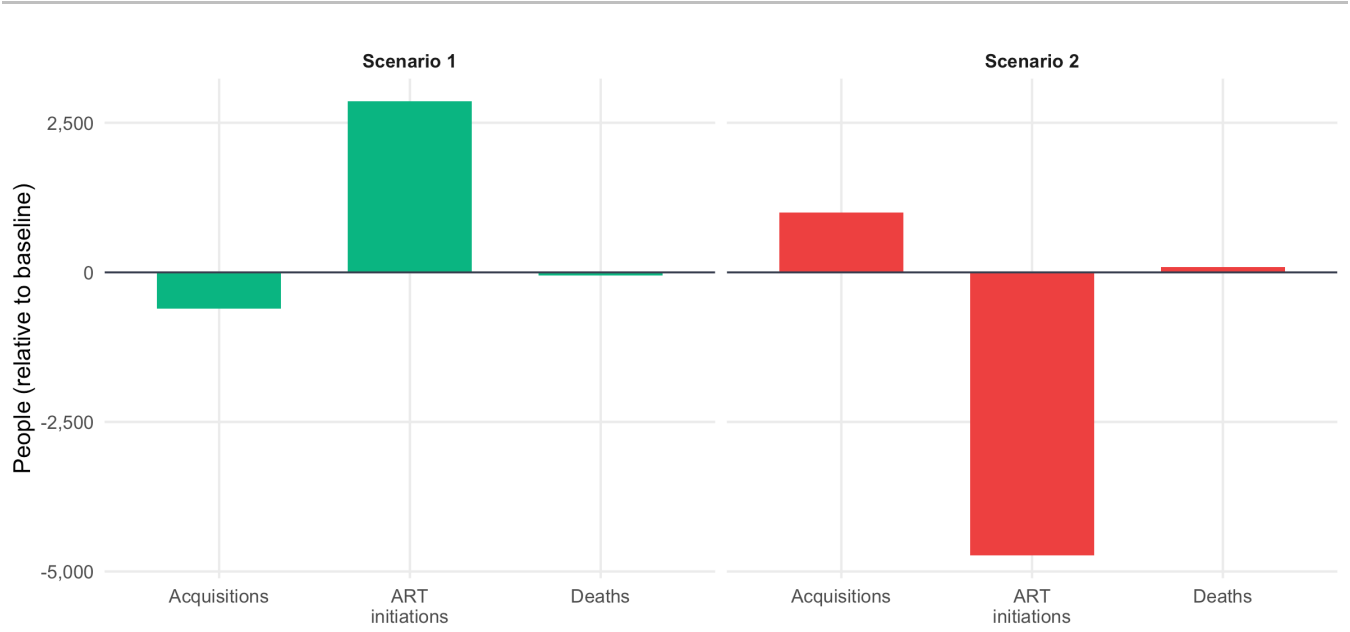

Cost analysis

Cost category	Baseline	Scenario 1	Scenario 2
Intervention costs	\$77,072,627	\$78,680,534 (+\$1,607,907)	\$75,451,205 (-\$1,621,422)
ART provision	\$168,661,475	\$169,073,758 (+\$412,283)	\$167,978,839 (-\$682,636)
Total programme cost	\$245,734,102	\$247,754,292 (+\$2,020,190)	\$243,430,043 (-\$2,304,059)

HIV care cascade — end of year

Impact summary — change from baseline

Intervention volumes by scenario

Intervention	Baseline	Scenario 1	Scenario 2
Prevention			
PrEP (oral)	133,901	133,901	133,901
PrEP (Lenacapavir)	1,624	1,624	1,624
VMMC	274,325	274,325	274,325
Condom distribution	21,739,000	21,739,000	21,739,000
Infant HIV prophylaxis to reduce vertical transmission	74.0%	74.0%	74.0%
Testing & Diagnosis			
Testing: facility-based (general)	3,671,497	4,222,222	3,120,772
Testing: network testing	0	0	0
Testing: index testing	291,365	335,070	247,660
Testing: community-based	516,869	594,399	439,339
Testing: key populations & STI services	0	0	0
HIVST (Facility-based)	278,452	320,219	236,684
HIVST (Community-based)	278,452	320,219	236,684
EID (Early Infant Diagnosis)	76.0%	76.0%	76.0%
ANC: HIV testing	93.0%	93.0%	93.0%
PNC: HIV testing	24.0%	24.0%	24.0%
Treatment Monitoring & Quality			
Routine VL monitoring	79.0%	79.0%	79.0%
MMD: 3-month dispensing	4.0%	4.0%	4.0%
MMD: 6-month dispensing	96.0%	96.0%	96.0%
MMD: 12-month dispensing	0.0%	0.0%	0.0%
Community ART pick-up	30.0%	30.0%	30.0%
Retention & Adherence Support			
Enhanced adherence counselling	95.0%	95.0%	95.0%
Tracking & tracing	95.0%	95.0%	95.0%
ANC: Viral Load Testing	75.0%	75.0%	75.0%
PNC: Viral Load Testing	75.0%	75.0%	75.0%
Advanced HIV Disease Package			
CD4 testing (all new initiations)	55.0%	55.0%	55.0%
Full AHD package (LAM, CrAg, fluconazole)	35.0%	35.0%	35.0%

Use the tool to compare directions and trade-offs. Use country processes for the exact numbers in your plan. Report generated by the TIER-Plus Tool.
